

Company Overview

Engine Yard is a Platform as a Service (PaaS) company, whose commercial grade solution enables developers to focus on creating great applications, instead of managing platform and infrastructure operations. With deep application expertise, open access to the platform, and world-class DevOps support, thousands of companies across 58 countries trust Engine Yard. Engine Yard was founded in 2006 and is headquartered in San Francisco, California.

ENGINE YARD MANAGES THE CLOUD FOR YOU

Engine Yard Platform as a Service automates the configuration, deployment and ongoing maintenance of your applications in the cloud.

Deep technical expertise: Engine Yard is highly regarded for its expertise in and contribution to the PHP, Ruby, Java and Node.js communities. We are known worldwide for our customer satisfaction and support developed from years of experience managing thousands of production applications.

Commercial grade: Engine Yard provides a comprehensive, commercially hardened and secure solution that supports the entire application lifecycle. It delivers a rich set of capabilities including load balancing, backups and snapshots, cloning, high availability, database replication and more.

Open access: Engine Yard enables you to manage your entire platform while retaining full control of the environment. This gives you the flexibility and transparency to make any modifications required for your applications.

VALUE OF THE ENGINE YARD PAAS

- Increase agility and continuously improve applications
- Launch new projects faster without having to worry about DevOps, stack curation or development tools' maintenance
- Focus on innovation rather than systems and software stacks
- Reduce overhead and costs related to operations and support
- Retain complete control of application environments with customization options for configuration & deployment

ENGINE YARD HIGHLIGHTS

- Web-based, self service PHP, Ruby, Java and Node.js Platform as a Service
- Optimized for diverse scalability needs across enterprises, SMBs and startups
- Highly configurable architecture allows for environment customization
- Dedicated tenancy model allows customers to own and operate instances including full administrative access
- Architected for reliability as applications run directly on infrastructure independent of our platform
- With Premium Support you get 24x7 support & 99.9% SLA

USE CASES

Application developers, architects and application owners in startups and large enterprises, as well as dev shops and digital agencies use Engine Yard. Popular use cases include applications for gamification, social photo tagging, mobile gaming, online shopping and storefronts, sales promotions, product launches, hosting of interactive, rich media websites and partner portals.

CUSTOMERS

Hooroo, a Qantas company, runs its hotel search website on Engine Yard Cloud to meet its flexibility, scalability and performance requirements and has reduced the size of its DevOps team and accelerated its release schedule.

Badgeville, a leader in gamification solutions, offloaded operational requirements for deploying and maintaining the company's core applications and experienced a savings of 40% on operation costs.

IFTTT, the web service that lets users create powerful connections with one simple statement, deploys its app on Engine Yard. The company has relied on Engine Yard since day one for reliability and customer service.

Canvas, a New York City-based digital agency, relies on Engine Yard for scalability, reliability and technical expertise. The agency deploys their clients' award-winning apps, including an international television brand that has peak traffic during weekly episodes and a boutique hotel that has seasonal traffic spikes.

FREE TRIAL

The Engine Yard trial allows a new customer to run one medium compute instance for up to 500 hours free of charge.
